CLEARSPRAY

FullTank ClearSpray is an additive urea solution (32.5% urea) that can be used in vehicles equipped with SCR (Selective Catalytic Reduction) technology. The urea solution helps reduce the emissions of harmful nitrogen oxides (NOx).

Benefits

- ClearSpray reduces the likelihood of issues that may arise from the use of urea solutions in the catalyst. The presence of a non-foaming additive ensures optimal atomization, minimizing blockages of the SCR catalyst.
- ClearSpray is highly suitable for engines that do not reach operating temperature due to short running times and/or low engine load.
